Spryker PaaS+
Why Platform-as-a-Service should be upgraded

There are many benefits with the advancement of PaaS capabilities ranging from increased time-to-market to nominal development efforts, amongst many others.

In order to help future proof your commerce infrastructure, the **Spryker Platform-as-a-Service (Paas)** technology allows customers to develop, run and manage their Spryker application without any complexity of building, scaling and maintaining the infrastructure. It forms the foundation technology for Spryker's Cloud Commerce OS.

Choosing **Spryker's PaaS** offering means your business benefits from an inherent flexibility and agility that is suited for sophisticated transactional use cases in **B2B, Unified Commerce, Marketplaces and B2C.**
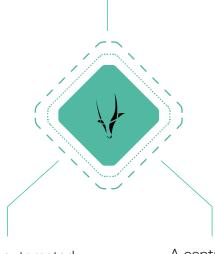

Why Spryker PaaS+

Spryker aims to continually improve our existing PaaS solution, and ensure our users are using the best-in-breed solution in the market. With the new iteration of the **Spryker PaaS+**, the solution sets about to address challenges related to upgradeability and offers the best product experience available and provides numerous benefits including:

◆ Time to market and time savings = Optimal Total Cost of Ownership

◆ Continued support & accountability

◆ Progressive scalability

◆ Increased security

◆ Flexibility

◆ Service resilience

PaaS+ Components

Quality control standards with immediate evaluation for compliance with Spryker best practise.

A semi-automated process for each upgrade.

A centralized location for all upgradability options.
